THEMATIC WORKSHOP

“Biopolymers and biomaterials for packaging and goods”

12th of October 2017, 9:30 – 16:00

Lodz University of Technology, International Faculty of Engineering
36 Żwirki Street, Lodz, Poland

Biopolymers and biomaterials are becoming increasingly popular in many industries. They are environmentally friendly, non-toxic and recyclable materials for production of various goods. It is not surprising that the packaging industry is the dominant sector of their applications. Based on a report published by Global Market Insights, Inc., a biopolymer coatings market size, in 2015, was worth more than USD 750 million. It is estimated to surpass USD 1.3 billion by 2024, with a CAGR of more than 6% over 2016-2024.

This thematic workshop organized by **Polish Technology Platform of Bioeconomy (PTPB)** will present the H2020 SuperBIO's program, and aims to stimulate the companies active in the production of biopolymers and biomaterials and their processing into consumer goods, primarily packaging.

SuperBIO (www.h2020-superbio.eu) is a Horizon 2020 innovation project that aims to develop new, innovative, cross-border and cross-sectorial industrial value chains in the European bio-based economy.

SuperBIO offers ten different professional innovation services to SMEs funded by the project for 75%.

PTPB is pleased to welcome you to this international event!

SuperBIO is funded by the research and innovation programme 'Horizon 2020' of the European Union under the Grant Agreement no. 691555 for the period from 01.06.2016 to 30.11.2018.
